axio 360

Responsible Cybersecurity Decisions Made Faster

The Challenge

Despite significant increases in IT and security budgets, cyber attacks are increasing in frequency and severity. Leaders struggle with prioritizing and making cybersecurity decisions quickly, with key stakeholders operating in silos and lacking a common language. CISOs often communicate in technical language, while executives and board members lose sight of how a cyber risk can materially impact the bottom line.

Traditional approaches to managing cyber risk are no longer applicable in today's landscape. Existing solutions are too time consuming and complicated to execute in today's climate and lose relevance quickly.

Our Solution

Axio360 is the only platform that rapidly aligns security initiatives with the business's acceptable levels of financial risk. With Axio360, security leaders, risk managers, executives, and boards are empowered with confident and continuous answers to the most critical questions about cyber risk.

- What's my exposure in financial terms?
- How mature is my cyber program?
- Where should I invest?

Making cybersecurity decisions shouldn't be hard. Axio delivers on meaningful communication, meaningful security, cyber economics.

> 66 The reality is that a cyber event will happen, and the key measure of our success is the level of impact it has in relation the security decisions we have made. Axio helps us choose the right investments to minimize impact and reduce risk. 99

axio

Axio is a 100% onshore cyber risk management SaaS company founded in 2015 by veterans in risk management and cybersecurity insurance.

Our customers
The Axio360 platform empowers cybersecurity leaders to make responsible decisions by providing clarity on what matters to the business. To date, Axio360 has supported over 1500 organizations, with strong usage among customers in critical infrastructure, manufacturing, and financial services organizations.

We wrote the textbook on cybersecurity maturity and risk management.
Axio leaders helped architect industry standard frameworks such as Cybersecurity Capability Maturity Model (C2M2) for the Department of Energy and CERT Resilience Management Model (CERT-RMM). The team contributed to the development of NIST CSF.

Cyber Risk Quantification

Analyze the unique risks to your business and calculate how individual scenarios would impact the bottom line. Quantification replaces laundry lists of security to-dos and daily firefighting with necessary next steps to address an organization's largest risks, prioritized by what would cost the business the most.

Features
- Transparent, easy-to-use user interface to build cyber risk scenarios and quantify risk
- Determine what financial resources you have available to recover from cyber events.
- Quick time to value: quantify risk in hours not months; board reports readily available in minutes
- Address gaps in cyber insurance coverage

Cybersecurity Program Planning

Improve your cybersecurity program's posture in a single dashboard. Assessments can be completed 70% faster so you can spend more time addressing priorities on your roadmap.

Features
- Build your cybersecurity roadmap in real-time
- Cybersecurity risk assessments readily available (NIST CSF, C2M2, CIS20, CMMC, and Ransomware Preparedness) with the option to custom configure your own model
- Benchmark across your internal organization and peers

How you benefit

- Facilitate **meaningful communication** without requiring a cybersecurity background or statistical training
- Continuously model how security decisions will **impact your business**
- Deliver **actionable results faster** than any other product on the market
