# Axio Assessment

Streamline management of even the most complex, multiassessment cybersecurity environments

Does your cybersecurity program require dozens or even hundreds of individualized assessments across different departments, business units and geographies? If so, you may struggle to gain a comprehensive view of your current security stance—resulting in increased risk, operational inefficiency, and difficulty justifying budget for cyber programs. Axio Assessment is the solution.
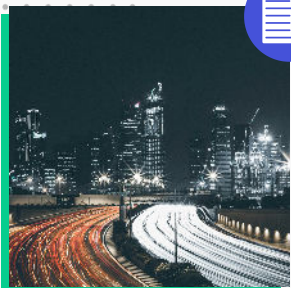

CASE STUDY

Critical Infrastructure Provider Moves to Holistic Cybersecurity Management

Security experts across this sophisticated and complex enterprise were operating in silos. Using Axio, in just two days, the company completed multiple divisional cyber risk assessments with an industry-standard risk framework, and aggregated all of them into the platform. With a singular view of their program's maturity, they prioritized and launched six projects addressing the most pressing vulnerabilities.

Manage Assessments of Your Enterprise Cybersecurity Programs in a Single Platform

Axio's cybersecurity assessment and compliance capabilities are part of a comprehensive suite of tools designed for the enterprise. Axio provides the tools and system of record you need to continuously assess the state of your cybersecurity programs, measure progress towards future state, and prioritize the best next actions to take to achieve your goals.

Axio's flexible data integration lets you pull in all the key cybersecurity data signals from across your enterprise. You can choose from a range of industry standard and custom frameworks to serve as the foundation of your assessments. Assessments are comprehensive and rapid, and they can be tailored to individual departments and completed in a matter of hours.

Outputs include rich scoring and metrics, internal and peer benchmarks, prioritized best next actions, and measurement of progress towards goals—all presented in easy-to-understand dashboards and reports. You can even get started with a 30-minute quick assessment that's immediately actionable.

Accelerate the Maturity of Your Cybersecurity

Identify Control Gaps

Use a holistic view of your cybersecurity stance across all business units to prioritize tasks and initiatives, building a dynamic program roadmap based on risk

Establish a System of Record

Drive the growth and efficiency of your cyber programs with an aggregated view of all assessments and automated performance reporting for the boardroom

Boost Operational Efficiency

Enable your cyber ops team to quickly and easily respond to inquiries about incidents and new threats, without poring through spreadsheets or initiating a "fire drill" each time

KEY FEATURES

Bring Together Multiple Assessments for Centralized Management

Aggregate dozens or even hundreds of assessments —across departments, business units and regions—all on a single platform. With the abiity to inspect and manage each security program from a centralized system, you'll gain a strategic, unified view of your overall security stance.

Bring Your Own Model: Manage Any Framework, From Standard to Custom

Axio offers the **flexibility to operate using any assessment model**. This includes your own custom models, derivative models where you've modified a standard framework, or any 3rd-party models from other providers. Of course, you can easily conduct assessments using Axio's pre-populated library of hundreds of frameworks including C2M2, CIS 18, CMMC, CRI Profile, MAS TRMG, NIST CSF, NIST 800-53 and many more.

Automatically Use Completed Assessments to Conduct New Assessments

With the assessment mapping capability, you can take any of your existing assessments and use its responses to **automatically populate responses for a new assessment**, saving tens of hours of painstaking manual work. Axio then identifies the net new questions requiring responses, allowing you to focus efforts only where they're truly needed.

Gain Insights with Peer Benchmarking and Comprehensive Reporting

Use dynamic dashboards with visual snapshots and numerical data to illustrate results and patterns, summarizing scores as well as individual and aggregated assessments from across your enterprise. Benchmark internally and against your peers, comparing your full history of historical, current, and target scores. Leverage automated reporting against every assessment model you utilize.
